SUMMARY

A data professional with hands-on experience across multiple projects and internships, skilled in transforming raw data into actionable insights using Power BI, MS Excel, SQL, and Python(Basic). Proficient in data visualization, data cleaning, and building ETL workflows and data pipelines to support performance reporting and analytics. Proven ability to enable data-driven strategies that improve decision-making and business outcomes.

SKILLS

Analytical Tools

SQL Server, Microsoft Excel (Pivot Tables, VLOOKUP, Power Query), Power BI

Programming Languages

SQL (Including Window Function, CTE, Subquery), Python (Basic)

Data Capabilities

Data Cleaning & Transformation, Dashboard Design, KPI Tracking / Reporting, Data Validation, Data Pipelines, Data Modeling, Statistical Analysis

Platforms & Development Tools

Git/GitHub, Google Colab

EDUCATION

Bachelor of Engineering in Information Science & Engineering

2025

NMAM Institute of Technology, Nitte Udupi
First class with Distinction

EXPERIENCE

Data Analyst Intern – Codec Technologies

08/2025 – 01/2026

- Analyzed and interpreted large-scale datasets using MySQL and Power BI to extract actionable insights and support data-driven business decisions.
- Developed and automated interactive dashboards with advanced DAX and Power Query, enabling real-time KPI monitoring and performance tracking across key business functions.
- Optimized and streamlined SQL queries and implemented data cleaning, transformation, and normalization pipelines, improving data accuracy, consistency, and retrieval efficiency.

PROJECTS

SQL Data Warehouse & Analytics Project 🔗

Tools: SQL, SQL Server, Data Warehousing, Data Modeling

- Built an end-to-end SQL Data Warehouse using Medallion Architecture to integrate CRM and ERP sales data from CSV sources into SQL Server for analytics and reporting.
- Developed ETL pipelines and SQL stored procedures for data ingestion, cleansing, standardization, normalization, and transformation, creating business-ready fact and dimension tables using a Star Schema model.
- Designed analytical data models and integrated datasets to support BI reporting and sales insights on customer behavior, product performance, and sales trends.

Pizza Sales Dashboard – Retail 🔗

Tools: Power BI, SQL, Data Modeling

- Built a Power BI dashboard analyzing 21,350 pizza orders (\$817.86K revenue, 49,574 pizzas sold) using advanced DAX and data modeling to track performance across temporal patterns, product categories, and individual SKU performance.
- Identified Classic category's 26.91% sales dominance and Thai Chicken Pizza's \$43K peak revenue vs Brie Carre's \$12K minimum, enabling menu optimization strategies projected to boost annual sales by 8-10%.

Credit Card Dashboard – Finance 🔗

Tools: Power BI, SQL, Power Query

- Developed a Dashboard in Power BI analyzing 656K+ credit card transactions using advanced DAX and data modeling, implementing customer segmentation across 15+ dimensions including demographics, spending behavior, and card categories.
- Uncovered that Blue cardholders and businessmen drove 83% and 31% of revenue respectively, enabling targeted marketing strategies projected to boost campaign ROI by 12-18%. Built reports and dashboards to explain data insights
